The journal **Physics of the Earth and Planetary Interiors** was launched in 1967 to fill the need for an international journal in the fields of planetary physics, geodesy and geophysics. It publishes original research papers, review articles, short communications and book reviews in the specialized professional fields described by its title.

Special issues of the journal are occasionally dedicated to proceedings of symposia and congresses which the editors feel would be of particular interest to the readers. For example, Volume 6 includes the Proceedings of the High Pressure Physics and Planetary Interiors Conference held at the Lunar Science Institute, Houston, Texas (February 29-March 3, 1972).

The Cumulative Author Index of Volumes 1–5 (1967–1972), which is reproduced here gives an indication of the high quality of the published articles and the wide range of topics covered.

All special issues are available separately.

Please make use of the order form which has been printed on the back cover for your convenience. Subscription orders and requests for specimen copies should be sent to your usual supplier or to the publisher North-Holland Publishing Company, Journal Division, P.O. Box 211, Amsterdam, The Netherlands.
